TECHNICAL SKILLS

Languages: Python, SQL, C#, JavaScript (ES6+), Java

Frontend: HTML, CSS, JavaScript, React, Next.js, Tailwind CSS

Backend & APIs: Node.js, Express.js, C#, ASP.NET

Databases: SQL Server Express, PostgreSQL, MySQL

Systems & Tools: Git, Docker (basic), Postman, Jira, CLI tools, Linux (Ubuntu), AWS (ECS, RDS, IAM, EC2)

Other: Automation, debugging, API integration, Authentication

EXPERIENCE

IT Support / Software Developer Intern

Robert Half – Northfield, MN | Apr 2024 – Present

- Developed RESTful API endpoints in C# using DTOs to structure request/response models and improve service maintainability.
- Diagnosed and resolved C# backend issues by analyzing logs, stepping through code, and validating API behavior with Postman.
- Refactored and debugged backend logic across Python services, improving reliability, maintainability, and incident resolution time in production environments.
- Collaborated with teammates to align C# backend changes with frontend requirements and existing system workflows.
- Supported and troubleshooted applications in Linux and Microsoft Azure environments, including identity/access workflows using Azure Entra ID (Azure AD) and cloud-based authentication issues.

IT Support / Web Developer

KGP Co. – Faribault, MN | Jun 2023 – Jan 2024

- Developed and enhanced production web application features using TypeScript, React, and REST APIs, collaborating with stakeholders to implement business requirements.
- Built internal automation tools and scripts to accelerate troubleshooting, data access, and repetitive IT workflows.
- Supported backend systems and databases by validating API responses, reviewing logs, and assisting with data-related issues across environments.

Software Engineer Intern

Accenture – Richfield, MN | Jun 2022 – Mar 2023

- Built and enhanced React and TypeScript components for enterprise-scale applications, following established design systems and coding standards.
- Assisted with backend debugging by writing SQL queries, validating API responses, and identifying data inconsistencies across services.
- Participated in Agile ceremonies (standups, sprint planning, retrospectives) and collaborated closely with senior engineers and cross-functional teams.

PROJECTS

Musipal — Full-Stack Music Social Platform (React, Node.js, Express, PostgreSQL, Spotify API)

- Designed and built a full-stack application enabling users to discover music, connect, and interact socially.
- Implemented authentication, real-time API integration, and dynamic UI updates.
- Designed SQL queries and JOINS to generate friend suggestions based on shared interests.

Help Desk Ticketing — Backend (C# / .NET 8, ASP.NET Core Web API, Dependency Injection, SQL)

- Built a RESTful Web API using C# and .NET 8 to manage help desk tickets, including creation, retrieval, and status tracking.
- Designed a clean controller + endpoint architecture with dependency injection, DTOs, and separation of concerns for maintainability.
- Implemented POST and GET endpoints, request validation, and structured responses following REST best practices.
- Integrated the API with a React/Next.js frontend, enabling real-time ticket submission and display from the UI.

Japahub — Full-Stack Platform (Next.js, TypeScript, Node.js, Express, Docker)

- Built a platform focused on mentorship and community resources.
- Developed backend services and REST APIs with scalability in mind.
- Collaborated on architecture decisions and feature planning.

My Outdoor Adventures — Full-Stack Platform (React, Node.js, Express, PostgreSQL, Google Maps API)

- Built a full-stack web app that helps users discover local activities based on difficulty level, price, and location.
- Collaborated in an Agile team environment using sprints, task planning, and iterative delivery of features.
- Integrated the Google Maps API to display activity locations and improve user navigation/discovery.

Spotify Listening Rooms — Backend (Python, Spotify Web API, Authentication, Session Management)

- Developed a Python backend service to power real-time Spotify listening rooms, enabling users to sync and share music playback.
- Integrated the Spotify Web API to retrieve playback state, track metadata, and listening position for room participants.
- Implemented backend logic to track song progress and session state, allowing users to stay synchronized within a shared room.

EDUCATION

Minneapolis Community & Technical College

A.A.S. Computer Software Development (Expected May 2026)

Coursework: Visual C# .NET Programming, Web Client & Server Programming, Software Development Lifecycle (SDLC), SQL Server Database Design, Systems Analysis & Design, Python Programming, Object-Oriented Programming, Database Management Systems.

Full-Stack Software Engineering Certificate

Prime Digital Academy (Nov 2024 – Jun 2025)

Coursework: JavaScript (ES6+), React.js, Node.js, Express.js, RESTful API Development, PostgreSQL Database Design, Git & GitHub Version Control, Agile/Scrum Development Practices, Test-Driven Development (TDD), Full-Stack Application Architecture, Debugging & Code Reviews.
